## 2021 Master Plant List / Pre-Order Form

Date: \_\_\_\_\_

Company: \_\_\_\_\_

Contact: \_\_\_\_\_

Phone #: \_\_\_\_\_

Email: \_\_\_\_\_

### Notes on Ordering

- Plants will be shipped as ready from winter 2020 - fall 2021. We cannot accommodate custom ship dates on pre-orders.
- We start preparing for the following year's production in summer. The earlier you get your "wish lists" to us, the better chance you have of receiving the plants you want.
- A plant request is not a guarantee. To better secure difficult-to-find material, contract grows are advised. Priority is given to contracts.
- Requests can be made for any plant or size not blacked out on the order form. Liners and treebands must be ordered in full flat quantities (50/flat).
- Minimum for pre-orders is 10 flats.
- Pre-orders will reflect 2021 pricing unless otherwise stipulated. **Prices are subject to change depending on seed cost, availability, or difficulty propagating.**

### Notes on availability

Our order form gives an overview of the plants we often grow. Other plants and sizes are generally grown on a contract basis. Production time for a finished plant can range from 6 weeks to 18 months or longer. The more lead-time we have, the more likely we can produce requested plants.

There are notes on both "Pre-order Status" and "Order Deadline." Pre-order Status indicates species that have limited quantities or seasons. The Order Deadline is the last date we can make significant changes to our production plans/timeline.

California natives are wonderful, diverse plants well-adapted to typical conditions in their habitat. Their preference for specific soils, light, or microclimate make them more challenging to produce than conventional crops. Environmental conditions, including rain, sun, and temperature, can speed up, delay, or adversely affect germination or rooting. There may be unexpected seed or crop failures as well. We do our best to have most plants available throughout the year. However, some plants cannot be produced outside of their preferred season. Once those plants sell out, there will not be a replacement crop until the following season.

Thank you,
